PROFESSIONAL SUMMARY

Data Science graduate with hands-on experience building machine learning models, developing full-stack applications, and conducting exploratory data analysis and semantic text analysis across 15+ independent projects and two data science internships. Proficient in Python, R, SQL, and the core ML/data stack (Pandas, NumPy, Scikit-learn), with additional full-stack experience in React, Tailwind CSS, Prisma, and PostgreSQL. Seeking a full-time role in Data Science, Machine Learning, or Data Analytics to apply analytical, predictive modeling, and engineering skills in a professional environment.

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, Java, C, C++

Libraries & Frameworks: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, React, Tailwind CSS, Prisma

Tools & Platforms: Jupyter Notebook, Git/GitHub, Power BI, VS Code

Databases: PostgreSQL, MySQL, MongoDB

INTERNSHIP EXPERIENCE

Data Science Intern — AXI Tech

July – August 2026

- Built a full-stack Complaint Management System from scratch, covering UI, backend, and database design
- Developed the frontend with React and Tailwind CSS, and the backend with Prisma ORM on a PostgreSQL database
- Collected and processed real complaint data, then applied semantic analysis to automatically group complaints by category
- Generated text embeddings and used TF-IDF to produce initial cluster labels, refining them manually where automated labels were not meaningful
- Applied K-Means clustering on the embeddings to segment complaints into coherent categories

Data Science Intern — Estrat's

July – August 2025

- Completed a 4-week internship applying Python-based data analysis and machine learning techniques to real-world datasets across multiple projects
- Performed exploratory data analysis and model training in collaboration with the team, translating classroom concepts into practical solutions
- Documented and version-controlled project work on GitHub, supporting knowledge-sharing and reproducibility

PROJECTS

Complaint Management System with Semantic Complaint Clustering | React, Tailwind CSS, Prisma, PostgreSQL, Python, Scikit-learn

- Designed and built a complete full-stack system — UI, backend, and database — for managing and categorizing complaints
- Applied semantic analysis using text embeddings and TF-IDF, refined with manual labeling, then K-Means clustering to group complaints by category

Fuel Efficiency Prediction Using Polynomial Regression | Python, Scikit-learn, Pandas

- Built a regression model predicting vehicle fuel efficiency (MPG) from horsepower and weight using a 392-record automotive dataset
- Engineered features and removed outliers via the IQR method; trained a degree-2 Polynomial Regression model achieving R^2 of 0.688 and MSE of 15.91

Customer Segmentation Using K-Means Clustering | Python, Scikit-learn, Seaborn

- Segmented shoppers by annual income and spending score using K-Means clustering; visualized clusters to generate targeted marketing insights

Exploratory Data Analysis — Supermarket Sales | Python, Pandas, Matplotlib, Seaborn

- Conducted end-to-end EDA on supermarket sales data, identifying key sales trends and designing visualizations on product line performance

12+ additional projects (clustering, classification, regression, SQL analytics, R) at github.com/Aina-ds

EDUCATION

BS in Data Science — COMSATS University Islamabad

Expected January 2028

6th Semester | CGPA: 3.53/4.0 | Islamabad, Pakistan

Relevant Coursework: Machine Learning, Artificial Intelligence, Data Science with R, Data Mining, Database Systems, Cybersecurity Fundamentals, Data Structures, Object-Oriented Programming, Programming Fundamentals
